Claims

1. Method for authorizing a third party, the method comprising:

performing, at a first entity:

obtaining (1110) a biometric feature of the third party;

obtaining (1120) a secret value;

combining (1130) the biometric feature and the secret value so as to obtain a combined secret value;

performing, at an access controller:

receiving (1210) the secret value; and

receiving (1220) the combined secret value;

processing (1230) the combined secret value using the secret value so as to obtain a decoded biometric feature;

the method further comprising at the access controller or a different entity:

obtaining (1310) a biometric feature to be verified;

comparing (1320) the decoded biometric feature with the biometric feature to be verified so as to obtain a comparison result; and

authorizing (1330) the third party based on the comparison result such that the third party is authorized for a permission or access at the access controller on behalf of the first entity.

wherein the biometric feature is transmitted from the access controller (150; 450) to the first entity (100) based on an input signal generated by the third party (250);
